BASED IN
Ramallah, Palestine

SKILLS

Front end

React · Alpine.js · Tailwind · React Native · Flutter

Back end

Spring Boot · Laravel · Node.js / NestJS · REST APIs

Data

PostgreSQL · MySQL / MariaDB

Infrastructure

Caddy · Cloudflare Tunnel · Docker · Nginx · Ubuntu · Git

Security

RBAC · IDOR · XSS · CSRF · SQLi · Audit logs · Field encryption

EDUCATION

B.Sc. Computer Science

Birzeit University · 2022 – Feb 2027 (expected)

Final semester: core courses and graduation project done (Healthcare Insurance Management System, the foundation of MediGuard).

LANGUAGES

Arabic — native

English — professional

BEFORE SOFTWARE

Ten years of phone and computer repair; fibre-optic splicing, network build-out and CCTV; ran a gaming café with 20+ networked machines. Volunteer paramedic, Palestinian Medical Relief Society (2020–2023).

FULL-STACK ENGINEER · FOUNDER OF NOVUS

Jadallah Baragitha.

I build and run the whole stack: React, Spring Boot, Laravel and Flutter on servers I operate myself. As founder of Novus I take products from data model to production and keep them running, with a focus on application security and full Arabic / English right-to-left delivery for healthcare, government, retail and marketplace platforms in Palestine.

10	7	20
YEARS FIXING HARDWARE	LIVE NOVUS PRODUCTS	SITES ON OUR OWN SERVERS

EXPERIENCE

Founder · Novus (formerly Olive Dev)

2025 – now

- Founded and lead a software and infrastructure company: web platforms, mobile apps and custom systems, plus the networks, servers and cameras they run on.
- Delivered the Kobar Municipality portal (e-services, GIS maps, tenders, complaints) and Kobar Club & Pitch, where the database itself blocks double bookings.
- Shipped Hisab (point of sale with an offline cashier), Sakan Pro and Mawaid.
- Run our own hosting in Ramallah: Caddy behind a Cloudflare Tunnel, every app a monitored service on PostgreSQL or MariaDB, nightly backups.

Founder & Lead Developer · MediGuard

2025 – now

- Built a multi-role health-insurance claims platform for insurers, providers, pharmacists and members: an eleven-state claim lifecycle with dual medical and financial review.
- Rules engine that turns policy documents into executable coverage rules: eligibility, price, co-pay and remaining cap at the point of care in about a second; 68 capability codes.
- Field-level AES-GCM encryption, an immutable audit trail and deterministic replay of any past payment; Arabic-first app on Google Play. Pitch deck and model for Flat6Labs Nawah.

Google Play ↗

Full-Stack Engineer · Intertech PS, Ramallah

May 2026 – now

- Own the bilingual Laravel control panel and CMS: per-module permissions and audit logging on every write.
- Built the finance suite (invoices, contracts, bank transactions) with ten reports in USD, ILS, EUR and JOD; many-to-many reconciliation so one transfer settles several invoices.
- Campaign platform (bulk email, bounces, scheduled sends, form builder) and a read-only AI assistant.

Software Development Intern · Intertech PS · Palestine Technopark

Nov 2025 – Apr 2026

- Palestine Creative Hub: national bilingual platform; security audit (IDOR, SQLi, XSS, CSRF) with every finding fixed before release.
- Palestine AI Week platform (1,000+ participants, 50+ partners) and the BeeHive co-working portal.

Co-Founder & CTO · Al-Murshid

Dec 2025 – Apr 2026

- Led technology for a West Bank service marketplace: team, roadmap and architecture; Flutter app on Node.js.
